

Qbase Information Platform™

Web-hosted data repository complemented by an easy-to-use dashboard

Product overview

Powerful dashboard display

The Qbase Information Platform features an easy-to-use dashboard that instantly presents data from multiple databases within an easy-to-understand, secure online system.

The graphical dashboard lets you view the data in your managed repository from different perspectives using intuitive, drop-down menus, buttons and checkboxes so you can select timeframes and include or exclude specific data sources.

Your data, rather than being restricted to rows and columns of raw numerical data, is now presented to you within your custom dashboard as color-coded graphs, tables and other visual formats. These visuals—which can include bar charts, pie charts, and other familiar graph and table types—are also fully customizable in size, shape, format, color and of course, data content.

Intuitive data presentation

If your organization is collecting megabytes or even gigabytes of information across multiple databases—medical data, scientific research data, crime statistics, sales data, demographic data, enrollment or donation information—the Qbase Information Platform gives you a way to view data from multiple data streams in a single dashboard.

"Before working with Qbase, the turnaround time for reporting was measured in months. Now it is measured in days and weeks."

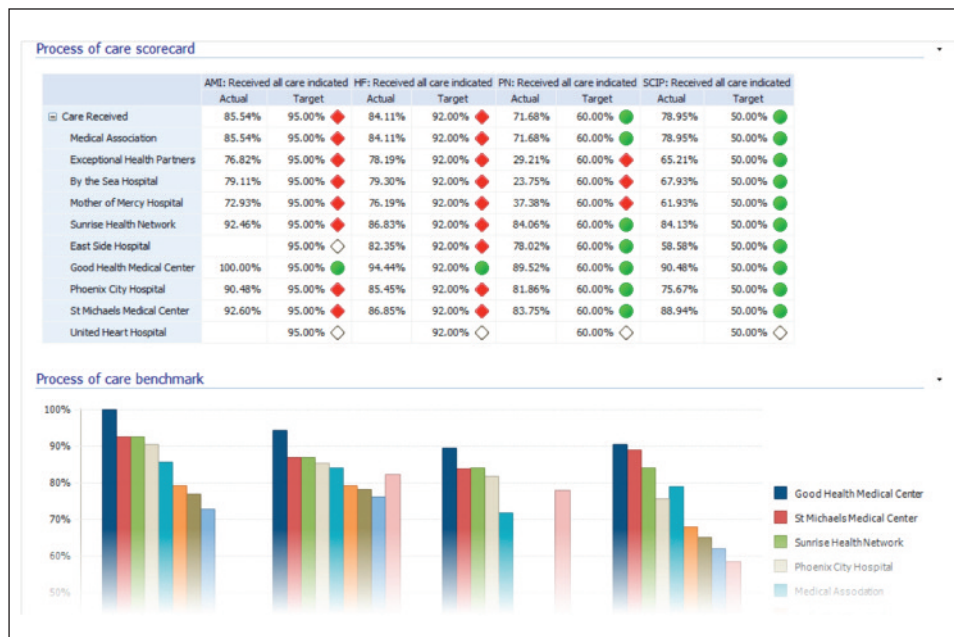

BRYAN BUCKLEW

President and CEO, Greater Dayton Area Hospital Association

"We're using Qbase to deliver current data in trauma as well as in other areas of concern for us, such as patient safety. We'll know better and sooner what's happening in our facilities."

GARY LUSTGARTEN

former Network Director
Kettering Medical Center Network

Easy to use and maintain

- allows access to different levels of data based on user-role and organization
- requires virtually no training
- integrates perfectly with Microsoft Office. You don't have to give up your spreadsheet-based knowledge system—in fact, once you've honed in on the information you need, you can instantly export it to Excel or PowerPoint.
- no database administration-level knowledge is required
- no time or effort needed to configure

Remote access

- hosted, on the Web
- no software or hardware to install
- access your data anywhere that you have an Internet connection
- safe and secure: Your data is safely hosted in a single location, secure and protected, backed up nightly and accessible only via your custom portal by those with access rights and current IDs and passwords

Superior business intelligence

The Qbase Information Platform is a true business intelligence tool, with complete reporting capabilities built in.

Refreshing your online dashboard via the browser actually queries the database, calling up any newly-added information and bringing it to your screen integrates with the graphics and data on your screen.

The purpose of the Qbase Information Platform is not to replace your transactional, day-to-day operational system data. Rather, it creates for you a “what does it mean?” repository from multiple databases.
